CLEANING AND MAINTENANCE INSTRUCTIONS TO WOODEN BATHS/TUBS

Our wooden baths/tubs will provide you with an extraordinary and unconventional way of bathing, on condition that every client respects maintenance rules: At first, water may leak in some places. After the first thorough wetting, the wood gets a chance to settle and thus prevents leakage. However, it is still **necessary to prevent excessive drying of the bath/tub**. The wood is dried around 9% moisture and glued together. The surface treatment is done by oils from the company *Complex Hartolwasch* - Austria, which we recommend to renew after a year. It is not recommended to use bath salts because of the damage of the paint. When bathing, first fill the bath with lukewarm water, then add hot water. When using soaps or shampoos, the bath must be rinsed thoroughly with lukewarm water and wiped with a cloth. If some water remains in the bath after draining, it is necessary to wipe it off. In addition, ventilate the room. If the bath is equipped with a backrest, remove it from the bath. A good, gentle and efficient cleaning agent for a wooden bath is the *Wellness Cleaner*, which can also be purchased from our company. The product should be sprayed over the entire area so that the bath is moist. Leave it for 10 min. and then rinse the surface with lukewarm water. The bath can be filled with clean water immediately after rinsing. We recommend to use it not only as a cleaner, but also as a prevention. Do not use chlorine-based cleaners. **It is not possible to place the wooden bath on underfloor heating**, near a radiator or in direct sunlight. For outdoor use, we recommend covering the bath with a cover or a tarpaulin. If it shrivels up, tighten the screws gently. In a room with a constant temperature above 18 ° C, in low use, we recommend putting a bucket of water into the bath regularly and covering it with a foil to maintain a certain humidity of the bath - excessive drying of the bath is damaging. In winter, water must not freeze in the bath to avoid damaging the bottom.

It is very pleasant to use different kinds of herbs in the bath for total relaxation. **Check the sanitary silicone around the bottom so that it is in the grooves. If needed, please add some.**

We believe that our products, when properly positioned and maintained, will provide you with pleasure and the whole family will love it.
